

ABSTRACT OF THE DISCLOSURE

A multi-task, multi-location networking system (10) which operates in combination with an internet service provider (42) known as Globalink AccessSM to allow persons remotely located in a hotel room, to easily and conveniently request a variety of data provided by the hotel and Globalink AccessSM. The system (10) consists of three major elements: a central data-processing subsystem (12) that is linked to a remote data-processing subsystem (40) by means of the Internet and a software program (60). The subsystem (12) is designed to receive, process and transmit the requested data to the remote data-processing subsystem (40) from where the requested data is viewed on a computer terminal (52).
